Eat Grapefruit for Healthy Gums

While it is known that citric acids can weaken tooth enamel and can cause tooth erosion, a new study shows a different take on vitamin C and oral health. Performed by Friedrich Schiller University in Germany, the study reported that eating grapefruit every day may help reduce bleeding gums and help promote the healing of gum disease.

Researchers had 58 volunteers with chronic gum disease eat two grapefruits a day and found that it had a positive effect on gum disease; this was true for smokers and non-smokers. The researchers believe this is due to the increase in vitamin C, which promotes the healing of wounds. Each grapefruit contains over 90 mg of vitamin C.

健康な歯茎のた めにグレープフ ルーツを食べる

クエン酸は歯のエナメル 質を弱め、歯の酸蝕症を 引き起こす可能性がある ことが知られています が、新しい研究では、ビ タミンCと口腔の健康に 対する異なる見方が示さ れています。ドイツのフ リードリッヒシラー大学 が実施したこの研究で は、グレープフルーツを 毎日食べると、歯茎の出 血が減り、歯周病の治癒 が促進される可能性があ ることが報告されていま す。
